

*Seit*  
*FI*  
1. (Once Amended) A method of providing Internet Protocol (IP) communications over at least one network with Quality of Service (QoS), comprising the steps of:

initiating a communication session between at least one first end client device and at least one second end client device; and

*CX*  
in response to initiating the communication session, performing the steps of:

providing information to at least one server of the communication session, said information include at least one of resource usage, policy, authorization, authentication, and accounting information;

providing the information to at least one router of the communication session for enabling a Quality of Service policy in session packets arriving at the router; and

establishing a communication session between said at least one first end client device and said at least one second end client device.

2. (Once Amended) The method as recited in claim 1, wherein the Quality of Service policy is in accordance with a Differentiated Services model.

16. (Once Amended) A method of providing Internet Protocol (IP) communications over at least one network with Quality of Service (QoS), comprising the steps of:

*FI*  
*CX*  
initiating termination of a communication session between at least one first end client device and at least one second end client device; and

in response to initiating the termination, performing the steps of:

providing information to at least one server of the communication session, said information include at least one of resource usage, policy, authorization, authentication, and accounting information; and
